

## **BolR: Box-Supervised Instance Representation** for Multi-Person Pose Estimation

Uyoung Jeong<sup>1</sup>, Seungryul Baek<sup>1</sup>, Hyung Jin Chang<sup>2</sup>, Kwang In Kim<sup>3</sup>

<sup>1</sup>Ulsan National Institute of Science and Technology <sup>2</sup>University of Birmingham <sup>3</sup>Pohang University of Science and Technology

Motivation	Method (2)	Results					
<ul> <li>Existing single-stage MPPE methods</li> <li>Sparse instance representation learning <ul> <li>Supervise only on GT keypoint locations</li> <li>No loss for single person</li> </ul> </li> <li>Insufficient multi-task supervision <ul> <li>More task heads, more computational cost</li> <li>Auxiliary tasks might dominate over the primary task</li> </ul> </li> </ul>	<ul><li>Bbox Mask Loss</li><li>Utilize box annotation which is far more abundant and</li></ul>	<ul> <li>Metric: mAP(mean Average Precision) (%)</li> <li>*: train on COCO and then apply finetuning</li> </ul>					
	<ul><li>easier to obtain than segmentation level annotation</li><li>For each instance:</li></ul>	Method	COCO val	COCO test-dev	OCHuman val	OCHuman test	CrowdPose test
	<ul> <li>3 embedding samples (center, positive, background)</li> <li>3 pull/push terms (in-box pull/push, out-box push)</li> </ul>	DEKR(W32)	68.0	67.3	37.9	36.5	65.7
	Background Sample Instance similarity Soft Sample In-box pull loss Instance push loss	DEKR(W48)	71.0	70.0	-	-	-
Contribution		ED-Pose(R50)	71.7	69.8	-	-	69.9
<ul> <li>Spatially rich instance representation learning with box.</li> </ul>		CID(W32)	69.8	68.9	44.9	44.0	71.3 (74.9*)
<ul> <li>Ispatially netrificance representation learning with box-level supervision</li> <li>Bbox Mask Loss provides learning signal on the entire image region, even when only one person is present</li> <li>Auxiliary task heads without additional computational cost during inference</li> <li>They are used only for training, and removed during inference</li> <li>Share the bottleneck ASPP to prevent overtaking the primary task</li> </ul>		CID(W48)	-	70.7	46.1	45.0	72.3
		BoIR(W32)	70.6	69.5	47.4	47.0	70.6 <b>(75.8*)</b>
		BoIR(W48)	72.5	71.2	49.4	48.5	71.2 <b>(77.2*)</b>
	Instance Embedding Map	0.1420 187 0.0045 0.0					
Method (1)	$\mathcal{L}_{center}$ $\mathcal{L}_{buk}$ $\mathcal{L}_{bbox}$ $\mathcal{L}_{emb}$				P	P259 12F	
<ul> <li>Overall framework</li> <li>Backbone output feature <i>f</i> passed to task-specific heads</li> <li>Instance-wise keypoint head(kpt) is a primary task head</li> <li>Auxiliary task heads</li> <li>Used only for training, and removed during inference</li> <li>Share the bottleneck ASPP module to prevent overtaking the primary task</li> </ul>	$ \begin{array}{c ccc}                                  $
